DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 11/26/2003 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hallinger 3,975,901, that teaches the invention as disclosed and as claimed: a apparatus and method of using it comprising: a turbine engine (Abstract, II. 2-3) comprising a compressor, a combustor 5, turbine blades 20 attached to a disc and mounted on a rotor, a stationary blade ring 28, a combustion-gas channel 16 and 13 extending from the combustor to the blade ring, an inlet for the compressor air 10, wherein the hot combustion gases and cold compressor gases mix in chamber 11, a valve 8 for regulating said mixing. Note that between the positions of supplying only cold air 17 or only hot air 16, the valve is in an

Art Unit: 3746

in-between position wherein the two are mixed. Note that the mixing of the cold and hot gases is occurring as presently claimed in the transient or base/part load operation of the engine (see the entire disclosure, in particular col. 3, II. 13-36 and in more detail II. 23-27, and also col. 8, II. 3-16, in particular I. 16). Regarding the claimed specific numerical limitations of the load when the mixing occurs, this limitations are considered to be obvious design choices, that one of ordinary skill in the art would have known how to optimize in view of the specific temperatures, and choice of materials used in the design. The claimed transition is read on the location where hot gas 16 splits from the main hot gas 14 exiting the combustor and passing through the turbine.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ehud Gartenberg whose telephone number is 571 272 4828. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on 571 272 4834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
